1. Executive Summary

McAllen Gold & Silver depends on the availability of technology, customer records, inventory documentation, financial information, and physical security systems to support daily business operations. The ability to restore these critical functions quickly following a disruptive event is essential to protecting customers, preserving revenue, and maintaining organizational stability.

This Enterprise Disaster Recovery and Business Continuity Plan establishes a structured framework for preparing, responding to, recovering from, and resuming operations following incidents that affect normal business activities. The plan integrates operational recovery procedures, cybersecurity controls, backup management, governance practices, and emergency communications into a single executive document.

Business continuity is supported through a disciplined backup strategy. Every Friday at **12:00 PM**, the primary Windows workstation is backed up to **External Backup Drive A**, followed immediately by **External Backup Drive B**. Both drives are verified, disconnected, and stored separately to reduce the likelihood of simultaneous loss due to ransomware, hardware failure, theft, or environmental disasters.

The organization has established the following recovery objectives:

• Recovery Time Objective (RTO): 24 Hours

• Recovery Point Objective (RPO): One Week

• Backup Frequency: Weekly (Friday at 12:00 PM)

• Backup Method: Dual Redundant Offline External Drives

This document serves as the official Disaster Recovery and Business Continuity Plan for McAllen Gold & Silver and shall be reviewed annually, after significant operational or technology changes, or following any activation of this plan.

Business Profile

- Industry: Precious Metals & Jewelry Retail
- Employees: 2–5
- Primary Location: McAllen, Texas

Recovery Objectives

- RTO: 24 Hours
- RPO: 1 Week
- Weekly Backup: Friday, 12:00 PM
- Backup Method: Dual Offline External Drives

Top Risks

- Ransomware
- Hardware Failure
- Fire
- Theft
- Power Outage

2. Purpose

The purpose of this Enterprise Disaster Recovery and Business Continuity Plan is to establish standardized procedures that enable McAllen Gold & Silver to continue or rapidly restore critical business operations following disruptive events.

This plan is designed to:

• Protect employees and customers.

• Safeguard precious metals, jewelry, luxury watches, cash, and other high-value inventory.

• Preserve customer, inventory, financial, and operational records.

• Reduce operational downtime.

• Establish repeatable recovery procedures.

• Restore technology within approved recovery objectives.

• Maintain customer confidence during disruptive events.

• Support long-term operational resilience.

3. Scope

This plan applies to all critical business systems, technology assets, operational records, and supporting infrastructure necessary to conduct daily business operations.

Assets covered include:

• Primary Windows workstation

• Customer records

• Inventory documentation

• Financial records

• Business email

• Electronic documents

• Printer and scanner

• Internet connectivity

• Surveillance system

• External Backup Drive A

• External Backup Drive B

This plan addresses incidents including:

• Fire

• Flood

• Severe weather

• Power outage

• Internet outage

• Hardware failure

• Ransomware

• Malware

• Theft

• Accidental deletion

• Human error

---

4. Business Objectives

McAllen Gold & Silver has established the following strategic objectives for disaster recovery and business continuity.

1. Protect life and ensure employee safety.
2. Secure customer trust through rapid restoration of services.
3. Protect precious metals, jewelry, watches, cash, and other critical inventory.

4. Preserve customer, inventory, financial, and operational records.
5. Restore technology services within established recovery objectives.
6. Resume normal business operations as quickly as practical.
7. Minimize operational, financial, and reputational impact.
8. Maintain compliance with documented operational procedures.

---

5. Roles and Responsibilities

Business Owner

The Business Owner serves as the executive authority during a disruptive event and is responsible for declaring a disaster, authorizing recovery activities, communicating with stakeholders, approving operational recovery, and ensuring that this plan remains current.

Administrative Support

Administrative personnel assist with backup verification, documentation, inventory validation, recovery procedures, customer communication, and restoration of daily business operations.

Third-Party Vendors

Approved vendors provide hardware replacement, internet restoration, technical support, equipment repair, software assistance, and insurance coordination when required.

---

6. Planning Assumptions

This plan has been developed using the following operational assumptions.

• Weekly backups are successfully completed every Friday at 12:00 PM.

• External Backup Drive A and External Backup Drive B remain offline except during scheduled backup operations.

• Backup media is verified before being returned to secure storage.

• Critical business information resides on the primary Windows workstation.

• Replacement hardware can be obtained within the established Recovery Time Objective.

• Employees understand and follow documented recovery procedures.

• This document will be reviewed annually and updated following significant operational or technology changes.

Executive Readiness Statement

McAllen Gold & Silver recognizes that operational resilience is essential to protecting customers, preserving organizational reputation, and sustaining long-term business success. Through disciplined backup management, documented recovery procedures, clearly defined responsibilities, and continuous governance, the organization is positioned to recover from disruptive events while minimizing operational, financial, and reputational impact.

Business Impact Analysis

Purpose

The Business Impact Analysis identifies the operational functions that are essential to the continued success of McAllen Gold & Silver and establishes recovery priorities following a disruptive event. This assessment provides management with a structured framework for determining acceptable downtime, allocating recovery resources, and restoring critical business functions in an organized and efficient manner.

The primary objective is to minimize operational, financial, and reputational impact while ensuring the continued protection of employees, customers, business assets, and confidential information.

Critical Business Functions

Customer Transactions

Customer transactions are the organization's highest priority because they directly generate revenue and maintain customer confidence. Any interruption to sales operations has an immediate financial impact and should be restored as quickly as possible.

Business Priority: Critical

Recovery Time Objective (RTO): 4 Hours

Recovery Point Objective (RPO): One Week

Inventory Management

Accurate inventory records are essential for maintaining accountability over precious metals, jewelry, luxury watches, and other high-value assets. Restoring inventory information is critical to preventing financial discrepancies and maintaining operational integrity.

Business Priority: Critical

Recovery Time Objective (RTO): 8 Hours

Recovery Point Objective (RPO): One Week

Financial Records

Financial records support accounting, purchasing, tax reporting, and daily business operations. Preserving these records ensures continuity of financial reporting and protects the long-term stability of the business.

Business Priority: Critical

Recovery Time Objective (RTO): 24 Hours

Recovery Point Objective (RPO): One Week

Business Communications

Email, electronic documents, and vendor communications enable daily coordination with customers, suppliers, and business partners. While temporary disruption is manageable, prolonged outages reduce operational efficiency.

Business Priority: High

Recovery Time Objective (RTO): 24 Hours

Recovery Point Objective (RPO): One Week

Printing and Document Processing

Printing and scanning support customer documentation, inventory records, and administrative workflows. These services should be restored promptly to maintain efficient business operations.

Business Priority: Medium

Recovery Time Objective (RTO): 48 Hours

Physical Security

The surveillance system provides continuous monitoring of the retail showroom, inventory storage areas, entrances, and other sensitive locations. Restoring physical security systems protects business assets and supports employee and customer safety.

Business Priority: High

Recovery Time Objective (RTO): 24 Hours

Recovery Priorities

Following any disruptive event, recovery activities shall be completed in the following order:

1. Protect employees, customers, and visitors.
2. Secure precious metals, jewelry, luxury watches, cash, safes, and confidential business records.
3. Restore the primary Windows workstation using the most recent verified offline backup completed during the scheduled Friday 12:00 PM backup process.
4. Validate customer records, inventory documentation, financial information, and operational files before resuming business operations.
5. Restore customer transactions, communications, and administrative functions.
6. Resume normal business operations while monitoring system stability and documenting all recovery activities.

Business Dependencies

Successful business operations depend on the availability of the following resources:

Technology

- Primary Windows Workstation
- External Backup Drive A
- External Backup Drive B
- Internet Connectivity
- Printer and Scanner
- Surveillance System

Information Assets

- Customer Records
- Inventory Records
- Financial Documentation
- Business Email
- Operational Documents

Physical Assets

- Retail Facility
- Secure Storage and Safes
- Precious Metals Inventory
- Jewelry Inventory
- Luxury Watch Inventory

Recovery Objectives

McAllen Gold & Silver has established the following recovery objectives to guide disaster recovery activities.

Objective	Target
Recovery Time Objective (RTO)	24 Hours
Recovery Point Objective (RPO)	One Week

Backup Frequency	Every Friday at 12:00 PM
Backup Storage	Two Redundant Offline External Drives
Backup Verification	Weekly
Disaster Recovery Testing	Annually

Business Impact Statement

McAllen Gold & Silver's ability to recover from a disruptive event depends on disciplined operational planning, consistent backup practices, and clearly defined recovery procedures. By prioritizing employee safety, protecting high-value inventory, preserving business records, and maintaining redundant offline backups, the organization is positioned to restore critical operations efficiently while minimizing operational, financial, and reputational risk.

Enterprise Risk Assessment

Risk Management Approach

McAllen Gold & Silver is committed to proactively identifying, evaluating, and managing risks that could disrupt business operations. This risk assessment provides a structured approach for reducing operational, financial, technological, and physical risks through preventive controls, documented recovery procedures, and continuous monitoring.

Each identified risk has been evaluated based on its likelihood of occurrence, potential business impact, and overall organizational risk. Appropriate mitigation strategies have been established to reduce the probability of occurrence and improve the organization's ability to recover quickly.

Risk Assessment Matrix

Risk	Likelihood	Business Impact	Overall Risk	Primary Mitigation
Ransomware	Medium	Very High	High	Dual offline backups, antivirus protection, employee awareness, Windows updates

Hardware Failure	Medium	High	High	Two redundant backup drives, replacement hardware, documented recovery procedures
Fire	Low	Very High	High	Insurance coverage, secure storage, offline backups, emergency response procedures
Flood	Low	Very High	High	Offline backups, elevated storage, insurance coverage, recovery procedures
Power Outage	Medium	Medium	Medium	Safe shutdown procedures, surge protection, documented recovery process
Internet Outage	Medium	Medium	Medium	Continue offline business activities where practical until service is restored
Theft	Low	High	Medium	Safes, surveillance cameras, restricted access, inventory accountability
Accidental File Deletion	Medium	Medium	Medium	Weekly verified backups and documented restoration procedures
Malware	Medium	High	High	Antivirus software, Windows updates, restricted administrative privileges
Human Error	Medium	Medium	Medium	Documented procedures, training, verification processes

---

Risk Categories

Cybersecurity Risks

Cybersecurity threats represent one of the greatest risks to business continuity. Ransomware, malware, phishing attempts, unauthorized access, and accidental deletion have the potential to disrupt operations or compromise business information.

To reduce these risks, McAllen Gold & Silver maintains:

- Offline backup media that remains disconnected except during scheduled backups.
- Windows security updates.
- Antivirus protection.

- Password-protected user accounts.
- Restricted administrative access.
- Documented recovery procedures.

Technology Risks

Technology failures may occur unexpectedly due to equipment malfunction, aging hardware, software corruption, or storage device failure.

The organization minimizes technology risk through:

- Two redundant external backup drives.
- Weekly backup verification.
- Annual recovery testing.
- Documented restoration procedures.
- Planned replacement of aging hardware as necessary.

Physical Risks

Physical events such as fire, flooding, theft, vandalism, or severe weather can significantly disrupt business operations and damage high-value inventory.

Preventive controls include:

- Monitored surveillance cameras.
- Secure safes and storage areas.
- Controlled access to business assets.
- Insurance coverage.
- Offline storage of backup media.
- Emergency response procedures.

Operational Risks

Operational disruptions may result from employee absence, utility outages, vendor delays, equipment failure, or communication interruptions.

Business continuity is supported through:

- Clearly defined recovery procedures.
- Established recovery priorities.

- Vendor contact information.
- Emergency communication procedures.
- Annual review of the Disaster Recovery and Business Continuity Plan.

Risk Treatment Strategy

McAllen Gold & Silver manages organizational risk using four primary approaches:

Risk Reduction

Implement preventive controls that reduce the likelihood or impact of disruptive events.

Examples include:

- Offline backups
- Antivirus software
- Windows updates
- Physical security controls
- Surveillance monitoring
- Documented recovery procedures

Risk Transfer

Transfer financial exposure through commercial insurance policies covering property damage, theft, equipment replacement, and other applicable losses.

Risk Acceptance

Certain low-impact risks may be accepted when the cost of additional mitigation exceeds the potential impact on operations.

Accepted risks shall continue to be monitored and reviewed during annual plan updates.

Risk Avoidance

Business practices that introduce unnecessary operational or cybersecurity risk should be eliminated whenever practical.

Examples include:

- Permanently connected backup drives.
- Shared administrator accounts.
- Unauthorized software installations.
- Storage of business-critical information on personal devices.

Key Risk Indicators

Management shall monitor the following performance indicators to evaluate the effectiveness of the organization's disaster recovery and business continuity program.

Performance Indicator	Target
Weekly Backup Completion	100%
Backup Verification	100%
Recovery Time Objective Achievement	Less than 24 Hours
Recovery Point Objective Achievement	One Week or Less
Annual Disaster Recovery Test	Successfully Completed
Critical Security Updates	Current
Antivirus Protection	Active at All Times

Management Review

The Enterprise Risk Assessment shall be reviewed annually, following significant operational or technology changes, or after any event requiring activation of the Disaster Recovery and Business Continuity Plan.

Management shall document identified risks, evaluate the effectiveness of existing controls, and update mitigation strategies as necessary to maintain the organization's operational resilience and long-term business continuity.

Incident Response and Recovery Procedures

Purpose

The purpose of this Incident Response and Recovery Procedure is to provide a standardized process for identifying, containing, responding to, and recovering from incidents that disrupt normal business operations. Prompt and organized response activities reduce operational downtime, protect business assets, preserve critical information, and support the safe restoration of business operations.

These procedures apply to cybersecurity incidents, technology failures, natural disasters, utility outages, and other events that may impact the availability of critical business functions.

Incident Response Lifecycle

All incidents shall be managed using the following response process.

Detect

Identify and confirm the incident through employee observation, system alerts, customer reports, or equipment malfunction.

Immediately notify the Business Owner when an event has the potential to interrupt normal business operations.

Assess

Determine:

- Nature of the incident
- Systems affected
- Potential business impact
- Risk to employees or customers
- Whether business operations can safely continue

Recovery activities should be proportional to the severity of the incident.

Contain

Take immediate action to prevent additional damage.

Examples include:

- Disconnect affected computers from the network.
- Preserve backup media by keeping both external drives disconnected.
- Secure inventory and confidential records.
- Restrict access to affected equipment.
- Document observed conditions.

Recover

Restore affected systems using documented recovery procedures.

Recovery shall always utilize the most recent verified offline backup completed during the scheduled Friday 12:00 PM backup cycle.

Validate

Before resuming business operations, verify:

- Customer records are complete.
- Inventory balances are accurate.
- Financial records are intact.
- Business applications function normally.
- Printing and scanning operate correctly.
- Internet connectivity has been restored.
- Surveillance systems are functioning properly.

Resume Operations

Business operations may resume once management confirms:

- Critical systems are operational.
- Recovery objectives have been achieved.
- Remaining risks are acceptable.

- Employees have been informed that normal operations may continue.

Ransomware Response

Ransomware represents one of the highest operational risks because it can rapidly encrypt business records and interrupt customer transactions.

If ransomware is suspected:

1. Disconnect the affected workstation from the network immediately.
2. Do not connect External Backup Drive A or External Backup Drive B.
3. Notify the Business Owner.
4. Document the incident.
5. Rebuild or replace the affected workstation.
6. Install Windows and required business software.
7. Restore business information using the most recent verified offline backup.
8. Change all business passwords.
9. Verify the integrity of restored customer, inventory, and financial records.
10. Resume operations only after management approves recovery.

Hardware Failure Response

Hardware failures may include hard drive failure, motherboard failure, power supply failure, or complete workstation failure.

Recovery steps:

1. Determine whether repair or replacement is required.
2. Replace defective equipment if necessary.
3. Install Windows.
4. Install required business software.
5. Restore business information using the latest verified backup.
6. Validate all business records.
7. Resume operations.

Fire Response

If fire threatens personnel or business operations:

1. Evacuate immediately.
2. Contact emergency services.
3. Do not re-enter the building until authorized.
4. Protect inventory only if it can be done safely.
5. Notify the insurance carrier.
6. Replace damaged technology.
7. Restore business information using verified offline backups.
8. Document all losses for insurance purposes.

Employee safety shall always take priority over property protection.

Flood Response

Flooding may result from severe weather, plumbing failures, or other environmental conditions.

Recovery priorities include:

1. Ensure employee safety.
2. Disconnect electrical equipment if safe to do so.
3. Protect backup drives from water damage.
4. Document affected equipment.
5. Contact the insurance carrier.
6. Replace damaged equipment.
7. Restore operations using verified backups.

Power Outage Response

During a power interruption:

1. Save work if possible.
2. Shut down equipment safely.
3. Disconnect sensitive equipment if necessary.
4. Continue manual business operations when practical.

5. Resume technology operations once stable power has been restored.
6. Verify system integrity before processing transactions.

Internet Outage Response

Internet connectivity is required for many daily business activities; however, certain operations may continue without internet access.

During an outage:

1. Confirm the outage is not caused by local equipment.
2. Contact the Internet Service Provider.
3. Continue offline business functions whenever practical.
4. Record customer transactions manually if necessary.
5. Resume electronic processing once connectivity returns.
6. Verify successful synchronization of business records.

Incident Severity Classification

Severity	Description	Required Response
Critical	Business operations cannot continue.	Immediate response by management and activation of the Disaster Recovery Plan.
High	Significant disruption affecting critical operations.	Response within one hour.
Moderate	Limited operational disruption with temporary workarounds available.	Response during the same business day.

Low	Minimal operational impact.	Resolve during normal business operations.

Incident Documentation

Every incident requiring activation of this plan shall be documented.

Documentation should include:

- Date and time of the incident
- Person reporting the incident
- Description of the event
- Systems affected
- Business functions impacted
- Recovery actions performed
- Recovery completion time
- Lessons learned
- Recommendations for future improvement

Incident documentation supports continuous improvement of the Disaster Recovery and Business Continuity Program and provides valuable information for future planning, audits, and annual reviews.

Executive Response Statement

Effective incident response depends on preparation, clear communication, disciplined decision-making, and documented recovery procedures. By maintaining redundant offline backups, standardized recovery processes, and defined organizational responsibilities, McAllen Gold & Silver can respond to disruptive events confidently while protecting employees, preserving customer trust, safeguarding business assets, and restoring operations with minimal interruption.

Recovery Architecture

Recovery Strategy

McAllen Gold & Silver maintains a recovery architecture designed to restore critical business operations quickly while minimizing operational disruption and reducing the risk of data loss. The recovery strategy combines disciplined operational procedures, redundant offline backups, and clearly defined responsibilities to ensure business continuity following a disruptive event.

Recovery activities shall always prioritize employee safety, protection of high-value assets, preservation of business information, and restoration of customer-facing operations.

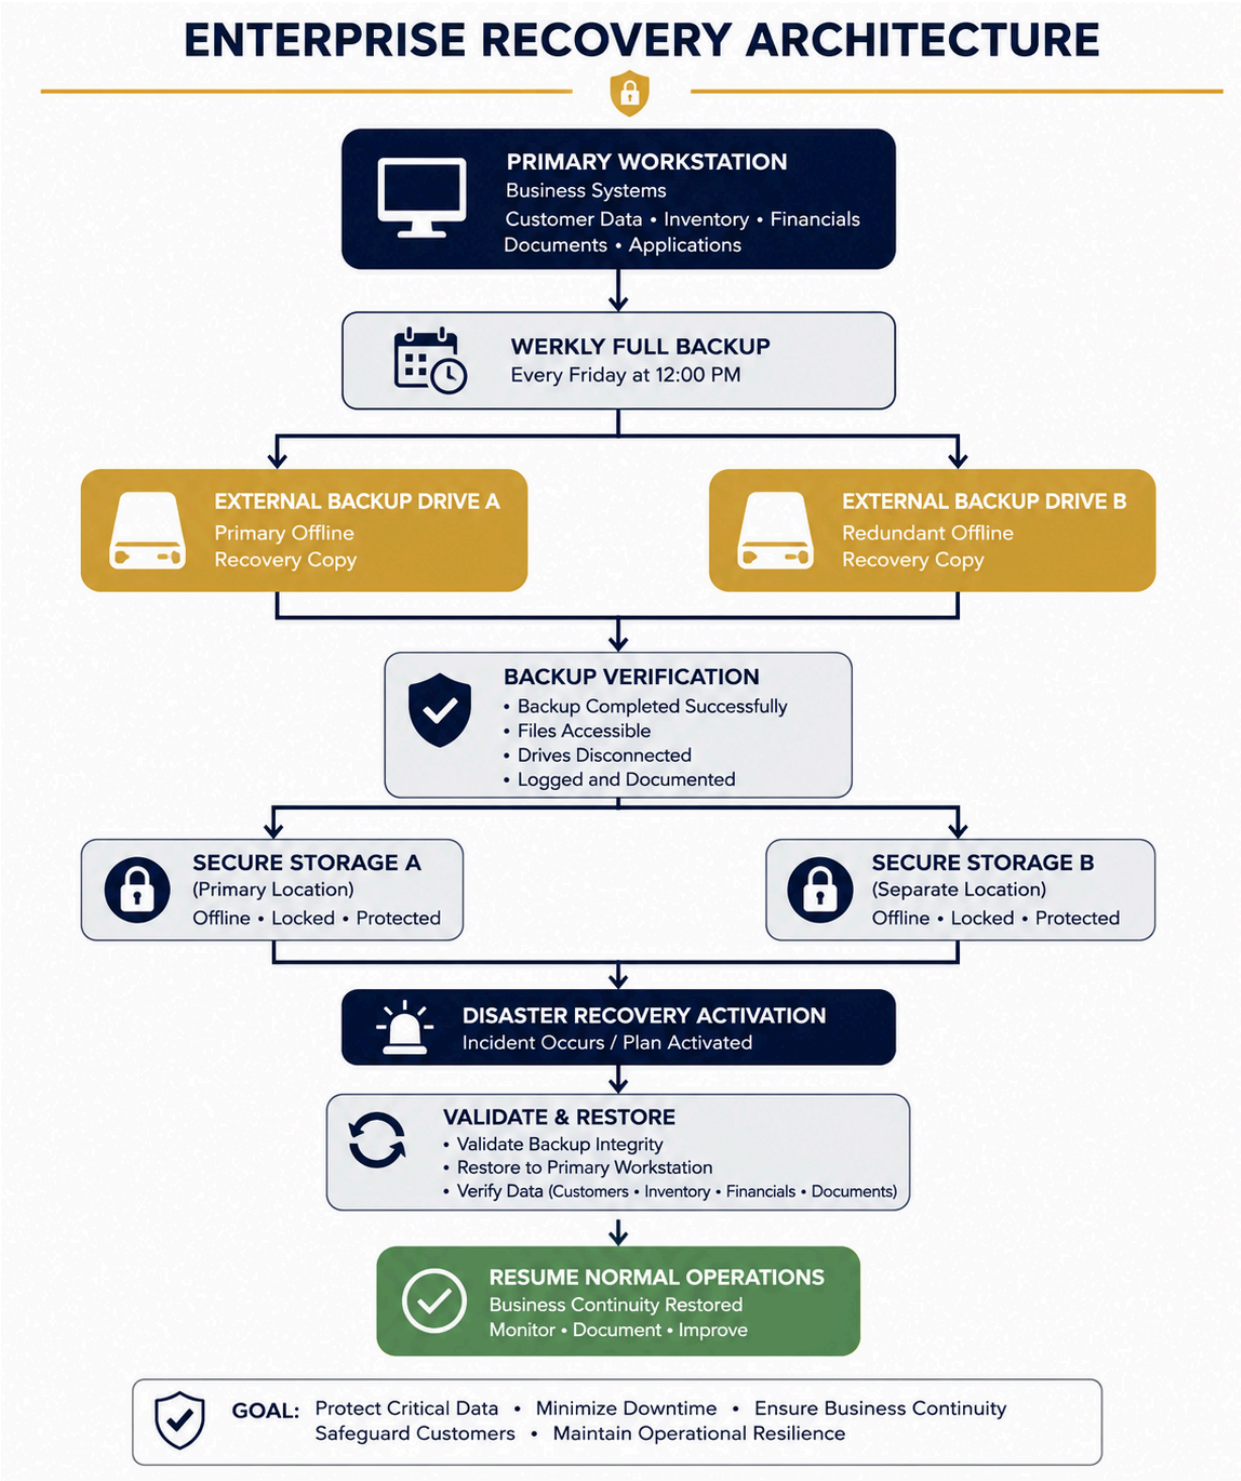

Recovery Objectives

All recovery efforts shall support the following organizational objectives:

- Protect employees, customers, and visitors.
- Secure precious metals, jewelry, luxury watches, cash, and other high-value inventory.
- Restore critical business systems within established recovery objectives.
- Preserve customer, inventory, and financial records.
- Resume customer transactions as quickly and safely as possible.
- Minimize operational, financial, and reputational impact.

Recovery Architecture Overview

Business operations are supported by a single primary Windows workstation protected through a dual redundant offline backup strategy.

This architecture ensures that no backup media remains continuously connected to the workstation, significantly reducing exposure to ransomware, malware, and other cyber threats.

Recovery Workflow

Every recovery event follows the same structured workflow to ensure consistency and reduce recovery time.

Detect

Identify the incident and determine whether business operations have been affected.

Examples include:

- Hardware failure
- Ransomware
- Fire
- Flood
- Internet outage
- Power interruption
- Accidental deletion

Activate

The Business Owner determines whether activation of the Disaster Recovery and Business Continuity Plan is required.

If activated, recovery activities begin immediately.

Contain

Prevent additional damage by securing technology, protecting business assets, and isolating affected systems.

Examples include:

- Disconnect affected computers.
- Keep backup drives offline.
- Secure inventory and confidential records.
- Preserve evidence if necessary.

Restore

Restore technology using the most recent verified offline backup.

Recovery activities include:

- Install replacement hardware if necessary.
- Install Windows.
- Install required business software.
- Restore business information.
- Reconnect business peripherals.

Validate

Before returning to production, management shall verify:

- Customer records
- Inventory records
- Financial documentation
- Business applications
- Internet connectivity
- Printing and scanning
- Surveillance cameras

No business operations shall resume until critical information has been validated.

Resume Operations

Normal operations may resume once management confirms:

- Recovery objectives have been achieved.
- Critical systems are operational.
- Customer transactions can be processed safely.
- Remaining operational risk is acceptable.

Recovery Responsibilities

Business Owner

Responsible for:

- Declaring a disaster
- Activating this plan
- Authorizing recovery activities
- Communicating with employees and stakeholders
- Approving restoration of business operations

Administrative Support

Responsible for:

- Assisting with recovery activities
- Verifying backup completion
- Restoring business documentation
- Validating inventory and financial records
- Maintaining recovery documentation

Third-Party Vendors

Provide support for:

- Internet restoration
- Hardware replacement
- Software installation
- Equipment repair
- Insurance coordination

Emergency Communications

Timely communication is essential during any disruptive event.

The following stakeholders shall be notified when appropriate:

Stakeholder	Notification Purpose
Employees	Operational instructions and reporting expectations

Customers	Service interruptions and expected restoration timelines
Insurance Carrier	Property damage, theft, or covered losses
Internet Service Provider	Connectivity issues
Hardware or Technology Vendors	Equipment replacement and technical support
Emergency Services	Fire, medical emergencies, criminal activity, or immediate threats

All communications should be accurate, timely, and coordinated through the Business Owner.

Recovery Readiness Checklist

Before declaring recovery complete, management shall confirm the following:

☐ Employee safety has been verified.

☐ Business facilities are secure.

☐ High-value inventory has been accounted for.

☐ Customer records have been restored.

☐ Inventory documentation has been validated.

☐ Financial records have been verified.

☐ Internet connectivity has been restored.

☐ Printing and scanning functions normally.

☐ Surveillance cameras are operational.

☐ External Backup Drive A has been disconnected and returned to secure storage.

☐ External Backup Drive B has been disconnected and returned to secure storage.

☐ Recovery activities have been documented.

☐ Business operations have resumed successfully.

Executive Recovery Statement

Business continuity depends not only on technology but also on disciplined operational execution. Through clearly defined recovery procedures, redundant offline backups, structured decision-making, and documented responsibilities, McAllen Gold & Silver is positioned to restore critical operations efficiently while protecting employees, customers, business assets, and organizational reputation. This recovery architecture provides a repeatable framework for responding to future disruptions with confidence, consistency, and resilience.

Weekly Backup Verification Log

This log documents the successful completion and verification of the organization's scheduled weekly backup process. A backup is not considered complete until both backup drives have been verified, safely disconnected, and returned to secure storage.

Backup Schedule: Every Friday at **12:00 PM**

Backup Media: External Backup Drive A and External Backup Drive B

Retention: Maintain completed logs as part of the annual Disaster Recovery and Business Continuity records.

Technology Asset Inventory

Purpose

The Technology Asset Inventory provides a centralized record of the systems, equipment, software, and backup media that support daily operations at McAllen Gold & Silver. Maintaining an accurate inventory enables efficient disaster recovery, supports replacement planning, and ensures critical assets are included in backup, maintenance, and recovery activities.

This inventory shall be reviewed quarterly and updated whenever equipment is added, replaced, retired, or relocated.

Critical Technology Assets

Asset	Description	Business Criticality	Backup Required	Physical Location
Primary Windows Workstation	Primary business computer used for customer transactions, inventory management, accounting, and business records	Critical	Yes	Office
External Backup Drive A	Primary offline backup device used during scheduled weekly backups	Critical	N/A	Office Safe
External Backup Drive B	Secondary redundant offline backup device stored separately from Drive A	Critical	N/A	Secure Storage Location B (HOME)
Internet Modem	Internet service equipment supporting business connectivity	High	No	Office
Wireless Router	Network device providing internet access	High	Configuration Only	Office

Printer / Scanner	Multi-function device supporting printing, scanning, and document management	Medium	No	Office
Surveillance System	Security camera recording system protecting employees and business assets	High	Configuration Only	Office
External Monitor	Display used with the primary workstation	Medium	No	Office
Keyboard and Mouse	User input devices	Low	No	Office

Software Inventory

Software	Business Purpose	Criticality	License Information
Microsoft Windows	Operating System	Critical	
Microsoft Office	Productivity Suite	High	
Norton Antivirus	Endpoint Protection	Critical	
Internet Browser	Business Communications	High	

Printer Drivers	Printing and Scanning	Medium	Included with Device

---

Business Information Assets

The following information assets are considered essential to continued operations and shall be included in every scheduled backup.

- Customer Records
- Inventory Records
- Precious Metals Inventory
- Jewelry Inventory
- Luxury Watch Inventory
- Financial Records
- Sales Documentation
- Vendor Information
- Administrative Documents
- Business Forms and Templates
- Disaster Recovery and Business Continuity Documentation

Backup Media Inventory

Backup Media	Purpose	Backup Frequency	Storage Location
External Backup Drive A	Primary Offline Backup	Every Friday at 12:00 PM	Safe In-Office
External Backup Drive B	Redundant Offline Backup	Every Friday at 12:00 PM	Secure Storage Location B (HOME)

Both backup drives shall remain disconnected from the primary workstation except during scheduled backup operations.

Internet Service Provider	Technical Support		
Computer Support	Technology Services		
Electric Utility	Utility Provider		

Replacement Priorities

Should replacement equipment become necessary following a disruptive event, assets shall be restored in the following order:

1. Primary Windows Workstation
2. Internet Modem and Wireless Router
3. External Backup Drive A and External Backup Drive B (if replacement is required)
4. Printer and Scanner
5. Surveillance System
6. Remaining peripheral devices

This prioritization ensures customer transactions, business records, and operational continuity can be restored as quickly as possible.

Asset Maintenance

Management shall verify the following on a regular basis:

- Technology inventory remains accurate.
- Serial numbers and warranty information are maintained.
- Software licensing remains current.
- Backup media remains operational.
- Equipment nearing end-of-life is identified for replacement.
- Vendor contact information remains current.

Inventory reviews shall be performed quarterly and documented as part of the organization's governance process.

Executive Asset Management Statement

Technology assets are fundamental to the continued operation of McAllen Gold & Silver. Maintaining an accurate inventory, protecting critical business information, and ensuring reliable backup media enable the organization to recover efficiently from disruptive events while minimizing operational downtime, financial loss, and risk to customer service. This inventory shall serve as the official record of technology resources supporting the Enterprise Disaster Recovery and Business Continuity Plan.

Disaster Recovery Testing and Plan Maintenance

Purpose

Disaster recovery testing validates the organization's ability to restore critical business operations using the procedures documented within this Enterprise Disaster Recovery and Business Continuity Plan. Regular testing provides assurance that backup media, recovery procedures, technology assets, and personnel remain prepared to respond effectively during an actual disruption.

Testing also provides opportunities to identify weaknesses, improve recovery procedures, and strengthen the organization's overall resilience.

Disaster Recovery Testing Objectives

The annual disaster recovery exercise is designed to verify that McAllen Gold & Silver can:

- Restore critical business data from the most recent verified backup.
- Recover the primary Windows workstation within the established Recovery Time Objective.
- Validate customer, inventory, and financial records following restoration.
- Confirm that documented recovery procedures remain accurate.
- Evaluate the effectiveness of communication and decision-making during recovery.
- Identify opportunities for process improvement.

Testing Schedule

Test Activity	Frequency	Responsible Party
Backup Verification	Weekly	Administrative Support

Sample File Restoration	Quarterly	Business Owner
Full Disaster Recovery Exercise	Annually	Business Owner
Review of Recovery Documentation	Annually	Business Owner
Emergency Contact Verification	Quarterly	Administrative Support
Technology Asset Inventory Review	Quarterly	Administrative Support

---

Annual Disaster Recovery Test

At least once each calendar year, management shall perform a complete recovery exercise using the documented procedures contained within this plan.

The exercise should include the following activities:

- Confirm the availability of Backup Drive A and Backup Drive B.
- Restore selected business files to a test location.
- Verify file integrity.
- Confirm customer records are accessible.
- Validate inventory documentation.
- Validate financial records.
- Confirm recovery objectives were achieved.
- Document all observations and corrective actions.

Testing should be scheduled during normal business hours whenever practical to ensure participation by responsible personnel.

Disaster Recovery Test Record

Field	Completion
Test Date	
Conducted By	
Recovery Scenario	
Backup Drive Used	Drive A ☐ Drive B ☐ Both ☐
Recovery Time Achieved	
Recovery Point Achieved	
Customer Records Verified	Yes ☐ No ☐
Inventory Records Verified	Yes ☐ No ☐
Financial Records Verified	Yes ☐ No ☐
Test Result	Pass ☐ Fail ☐

Follow-up Required	Yes ☐ No ☐

Post-Test Review

Following each disaster recovery exercise, management shall evaluate the effectiveness of the recovery process.

The review should address:

- Were documented procedures followed?
- Were recovery objectives achieved?
- Did any unexpected issues occur?
- Were responsibilities clearly understood?
- Were backups complete and usable?
- Did recovery take longer than expected?
- What improvements should be implemented before the next exercise?

All recommendations shall be documented and incorporated into future revisions of this plan.

Issue Identified	Corrective Action	Responsible Party	Target Completion	Status
				Open ☐ Closed ☐
				Open ☐ Closed ☐

				Open ☐ Closed ☐
				Open ☐ Closed ☐
				Open ☐ Closed ☐

Plan Maintenance

The Enterprise Disaster Recovery and Business Continuity Plan shall remain under continuous review to ensure that recovery procedures accurately reflect current business operations and technology.

The plan shall be updated whenever:

- Technology equipment is replaced or upgraded.
- Business software changes.
- Recovery procedures change.
- Business operations change significantly.
- Key personnel responsibilities change.
- Vendor information changes.
- Insurance information changes.
- Following any disaster recovery activation.
- Following the completion of the annual disaster recovery exercise.

Superseded versions shall be retained for historical reference in accordance with the organization's document retention practices.
